

## Sample Teaching Philosophies

### **My Teaching Philosophy:**

It is the responsibility of society to educate its youth, in a manner that improves the overall quality of life in that society. Having chosen to go into the education field, an educator has this same goal. An educator must be able to adapt to successfully bridge the gap between society and the younger generation. For this to occur the educator must use proven techniques to establish a classroom that is indicative of learning and understanding through the use of up-to-date technology. By doing this the educator has made learning fun, thus increasing the chances of the student retaining the information and being able to apply it to real life applications.

### **My Teaching Philosophy:**

It's critical to keep students interested and make class fun. I think it's also important to interact with students with personal relationships. I believe learning is sharing knowledge with students and making sure they understand and remember it, not just memorize it. Different uses of technology and group work can help accomplish this, along with new teaching skills acquired and shared among my fellow teachers and myself.

### **Philosophy of Education:**

I believe each child holds the key to the future, and because of this, each must be nurtured, molded and pushed to achieve their highest potential. This is done by giving them the tools and guidance to reach their own conclusions and to pursue their own dreams.

### **My Teaching Philosophy:**

Teaching is the intersection of passion, knowledge, rigor and mentorship. I believe that teachers have a greater responsibility to their students beyond the subjects that they teach and that teaching does not cease outside the school walls. There are so many teachable moments in a young person's life that are not content specific but life specific. When I show my students the passion that I have for them, combined with the knowledge I can share with them through rigorous lessons they will trust me to be a mentor to them.
